

PHUNG DUNG QUAN

Data Engineer

Career Objectives

Aim to apply my skills to real-world challenges, contribute to hands-on projects, and deepen my expertise in Artificial Intelligence and Data Science.

Professional Skills

- **Data Analysis:**

Experienced in data cleaning, transformation, and visualization using Excel, SQL, and Python.

- **Programming & Tools:**

Proficient in Python (pandas, numpy, matplotlib, seaborn) and Jupyter Notebook for analytical workflows and automation.

- **Statistics & Modeling:**

Solid understanding of probability, hypothesis testing, and regression models applied to real-world data problems.

- **Data Engineering:**

Familiar with database management, data pipelines, and integration of analytical models into production systems.

- **Soft Skills:**

Strong critical thinking, collaboration, and time management. Fluent in Cantonese and Mandarin Chinese.

Projects

- **Text Sentiment Analysis:**

Developed a sentiment analysis model for movie reviews using advanced NLP architectures (BERT, XLNet, and transformer-based models). This solution accurately predicts user sentiment and enables recommendations of highly-rated movies to new users.

- **Loan Approval Prediction in Banking:**

Built a data-driven model to evaluate customers' repayment ability using historical loan data and key customer attributes. The model identified an optimal risk threshold to inform loan approval decisions.

- **Insurance Purchase Prediction Model:**

Constructed a predictive model using customer demographic and financial features (e.g., age, income, occupation, marital status) to estimate the likelihood of insurance purchase. Insights from this model helped identify high-potential customer segments, allowing the company to optimize its marketing strategies.

- **Heart Disease Risk Prediction Model:**

Developed a predictive model utilizing patient health data (age, gender, cholesterol, blood pressure, blood sugar, etc.) to assess heart disease risk. This model assists physicians in early identification of high-risk patients and informs appropriate preventive care measures.

- **Automatic Labeling Engine:**

Developed an automatic text-labeling system by integrating unsupervised learning techniques (clustering, topic modeling) with zero-shot classification models (using BART and a natural language inference approach) to generate high-quality pseudo labels. Designed a semi-supervised pipeline leveraging transformer-based models and Sentence-BERT embeddings to infer sentiment and topics, evaluating label reliability via confidence scores and embedding similarity. This approach improved labeling accuracy by approximately 30% compared to baseline keyword-matching methods.

Education

High school

- THPT Bui Thi Xuan
- 2019 - 2022

University

- University of Science
- Major: Data Science
- 2022-2026

Language

- English
- Chinese

Contact

Phone

0909519886

Email

phungdungquan73@gmail.com

Address

81/78 Bach Van, Ward 5,
District 5, Ho Chi Minh city

Projects

• ZALO AI CHALLENGE 2025 - DRONE OBJECT DETECTION & TRACKING

Developed end-to-end computer vision system for real-time object detection and re-identification from drone surveillance footage
Built custom YOLO11-based detector optimized with TensorRT achieving 30 FPS inference speed and 85% mAP@50

Designed ResNet50-based ReID model with GeM pooling and online triplet mining, achieving 88.5% re-identification accuracy

Containerized entire pipeline with Docker for reproducible deployment and automated submission generation

Tech Stack: Python, PyTorch, YOLO11, TensorRT, OpenCV, Docker, ONNX
